

Nano ATO

Advanced Auto-Top-Off System

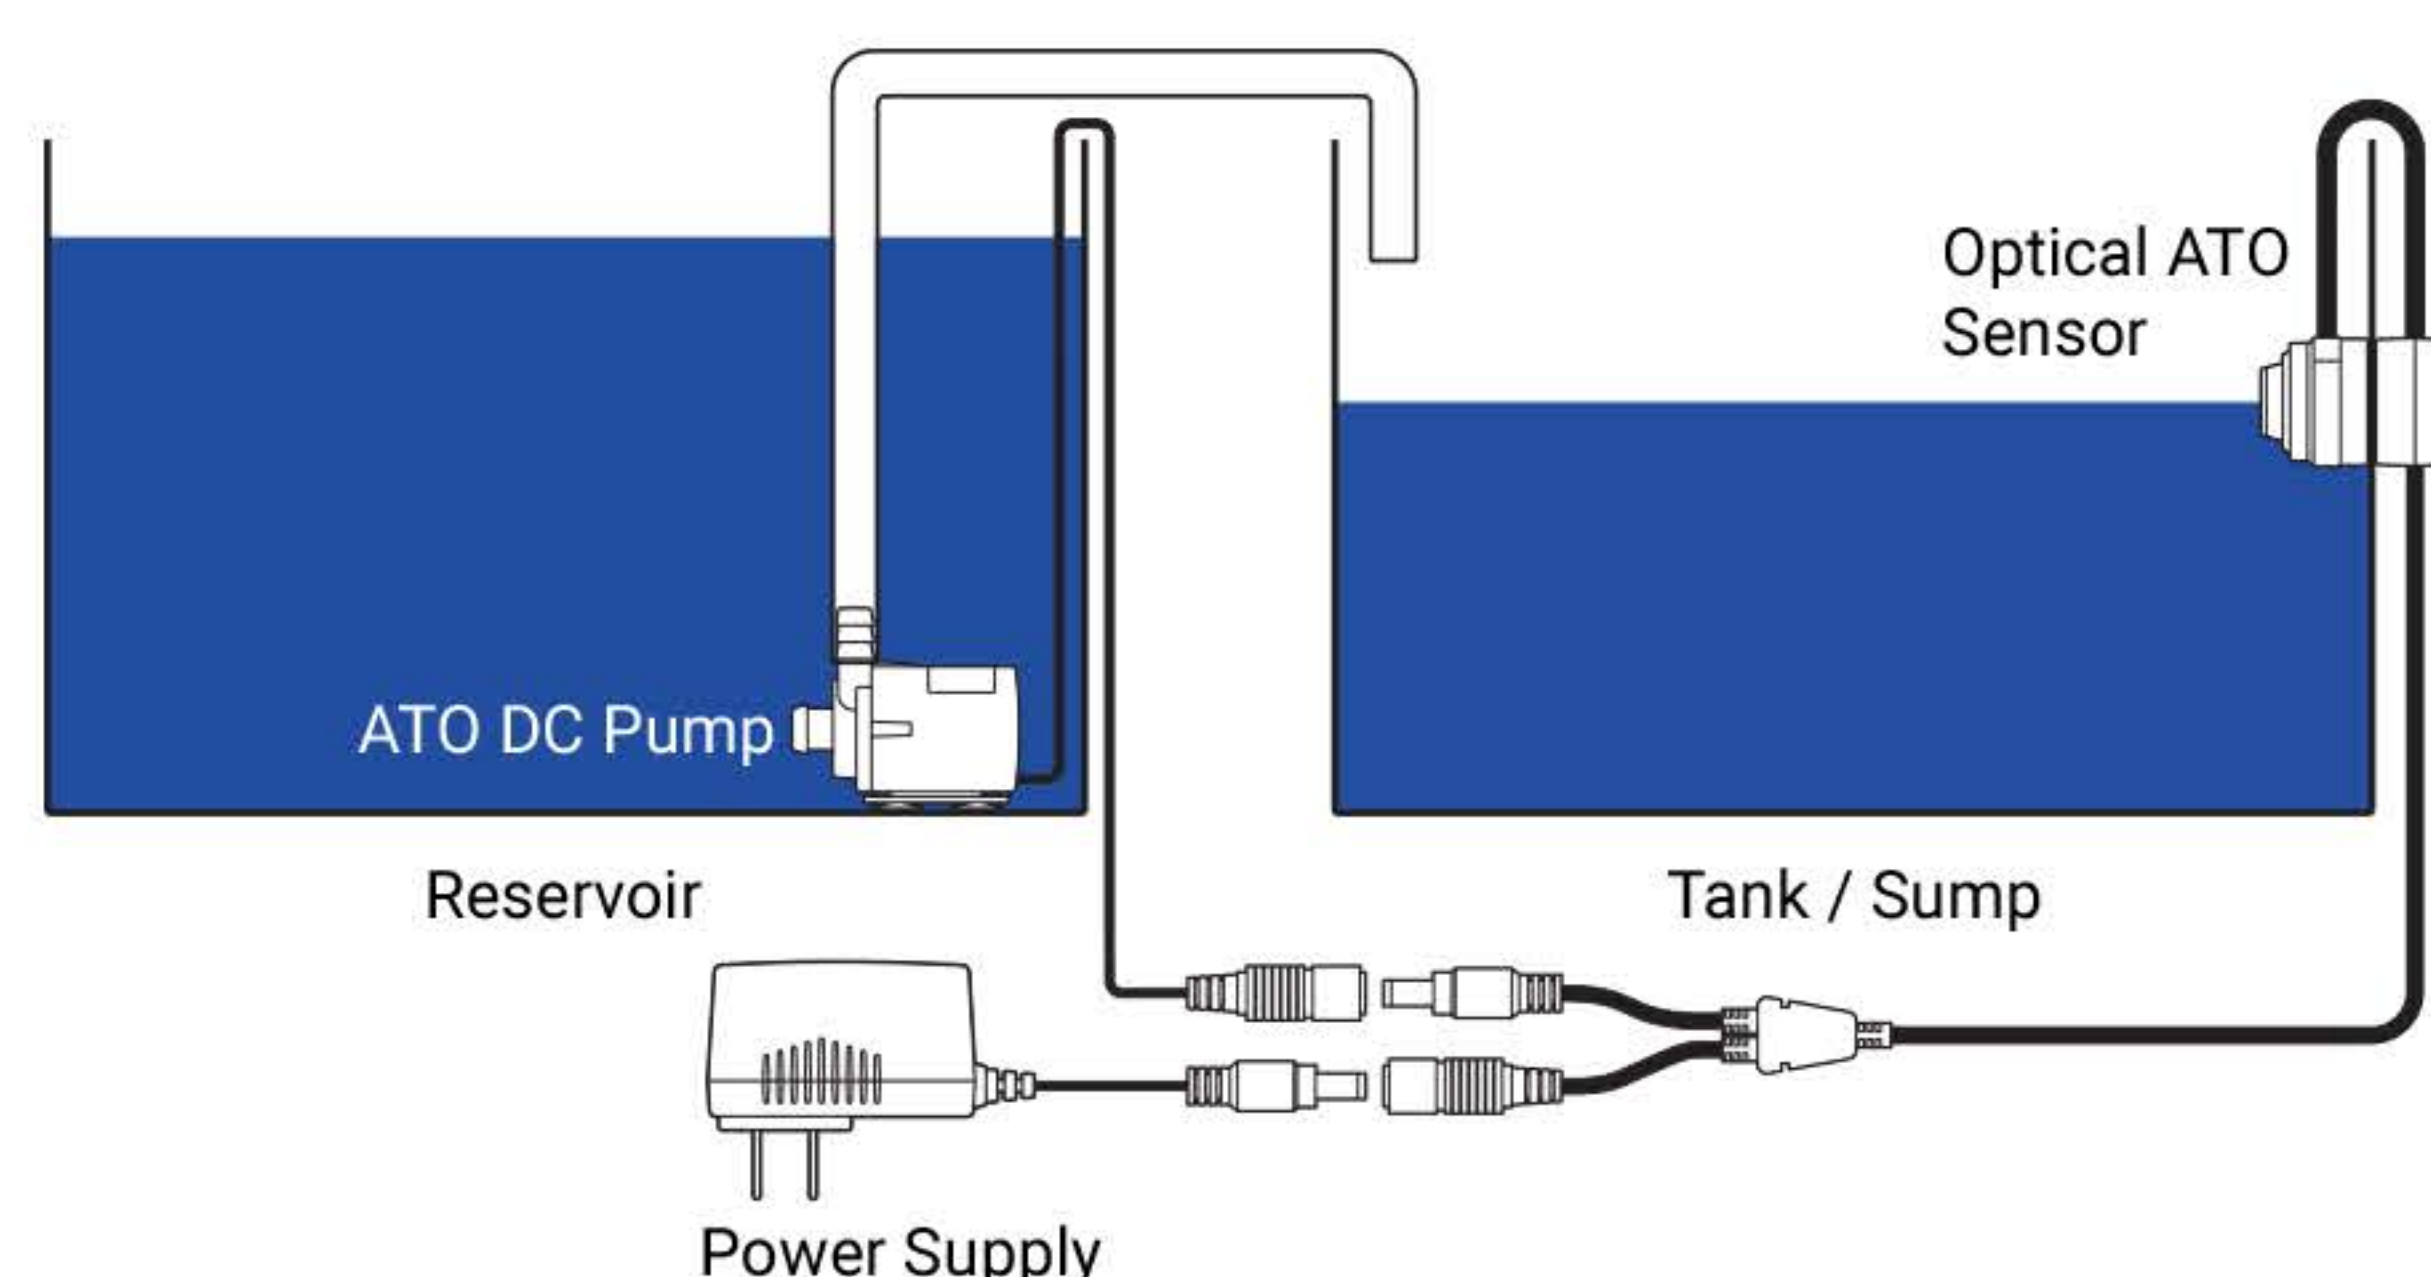

Our Most Advanced ATO

The JBJ Nano ATO is the perfect upgrade for your aquarium. Our most reliable auto-top-off system is re-imagined with dual optical level-sensors for ultimate precision. Enjoy the compact versatility of a digital sensor without compromising the security of overfilling your tank.

Installation is quicker than ever, and everything you need to get started is included in the box.

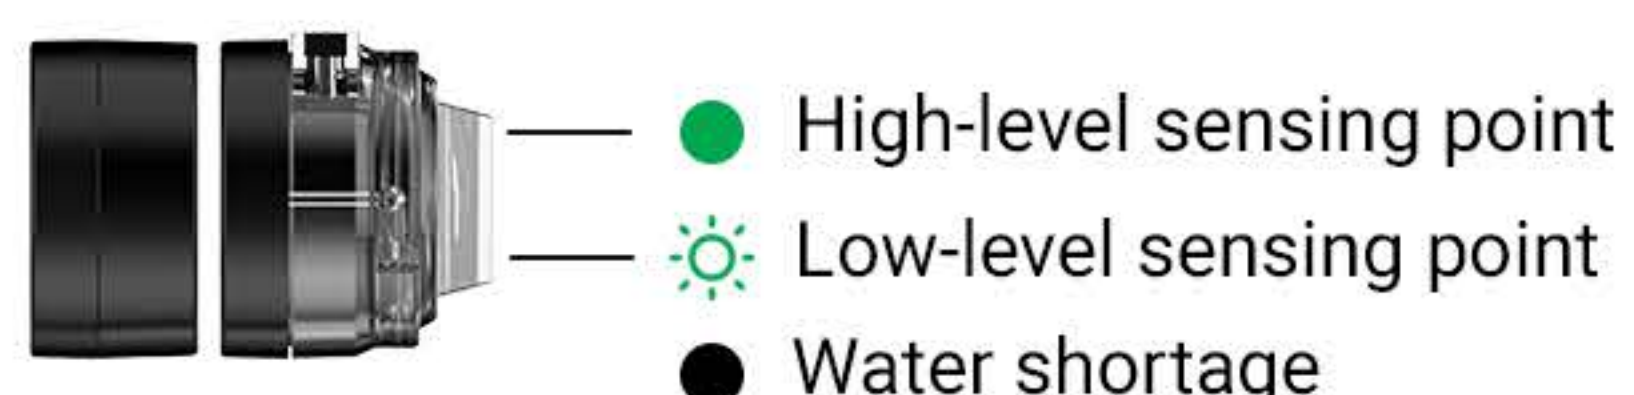

How It Works

Quick Installation

1. Install the ATO with a water level mid-level or lower than the ATO.
2. Place pump in reservoir, place tube in tank using included guide rail.
3. Plug-in the power supply first, then the water pump.
4. The system will automatically add water to the high-level sensing point.

ATO Sensors & Status Lights

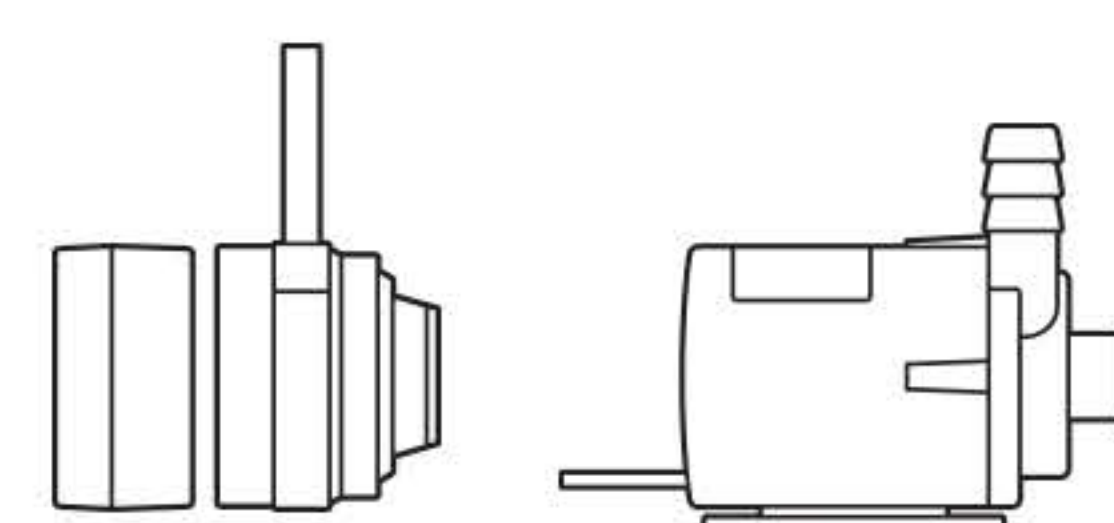

Optically Accurate

The included protective cover prevents tank inhabitants from covering the optical sensor. Additionally the protective cover reduces sudden changes in light or water surface disruption from affecting the sensor. This ensures accurate water level measurements every time.

The complete waterproof design allows the sensor to be mounted virtually anywhere. The magnetic mount can hold securely up to 15 mm glass thickness.

Pump Specifications

| Model | Power Consumption | Flow Rate | Head | Dimensions | Cable Length |
|--------|-------------------|---------------------|-----------------|------------------|----------------|
| JT-160 | 4 W at max flow | 74 gal/h (280 L/hr) | 7.2 ft (220 cm) | 4.5 × 2.5 × 4 cm | 60 in (177 cm) |

What's in the Box

- Nano ATO
- JT-160 DC pump
- Mounting kit
- Power supply
