

C-Breeze Nano

Low-Profile Aquarium Cooling Fan

Streamlined Design

The new C-Breeze Nano is designed with a powerful centrifugal fan that quietly cools aquariums with a powerful wide stream of air that speeds up evaporative cooling.

The low-profile design allows it to be neatly mounted on the side of your aquarium.

Evaporative Cooling

C-Breeze Nano is a cost effective way of controlling the temperature of your aquarium.

Powerful airflow blowing across the surface of the aquarium promotes evaporation, effectively cooling the aquarium.

Aquarium Size

C-Breeze Nano is ideal for aquariums up to 40 gallons, and works with salt or freshwater aquariums.

Quiet Operation

The large fan draws in air quickly to cool down your aquarium efficiently while operating quietly.

Powerful Airflow

C-Breeze Nano provides a constant stream of laminar airflow that works efficiently to keep your aquarium cool.

Technical Specifications

Model	Dimensions	Airflow	Tank Size
CF-55	4" x 3" x 6.5" (9.5 x 8.6 x 16.7 cm)	12 CFM	Up to 40 gallons
