Nano RL

All-In-One Aquariums

Streamlined Filtration System

The integrated overflow skimmer catches large debris from flowing into the coarse sponge that filters water from smaller particulates.

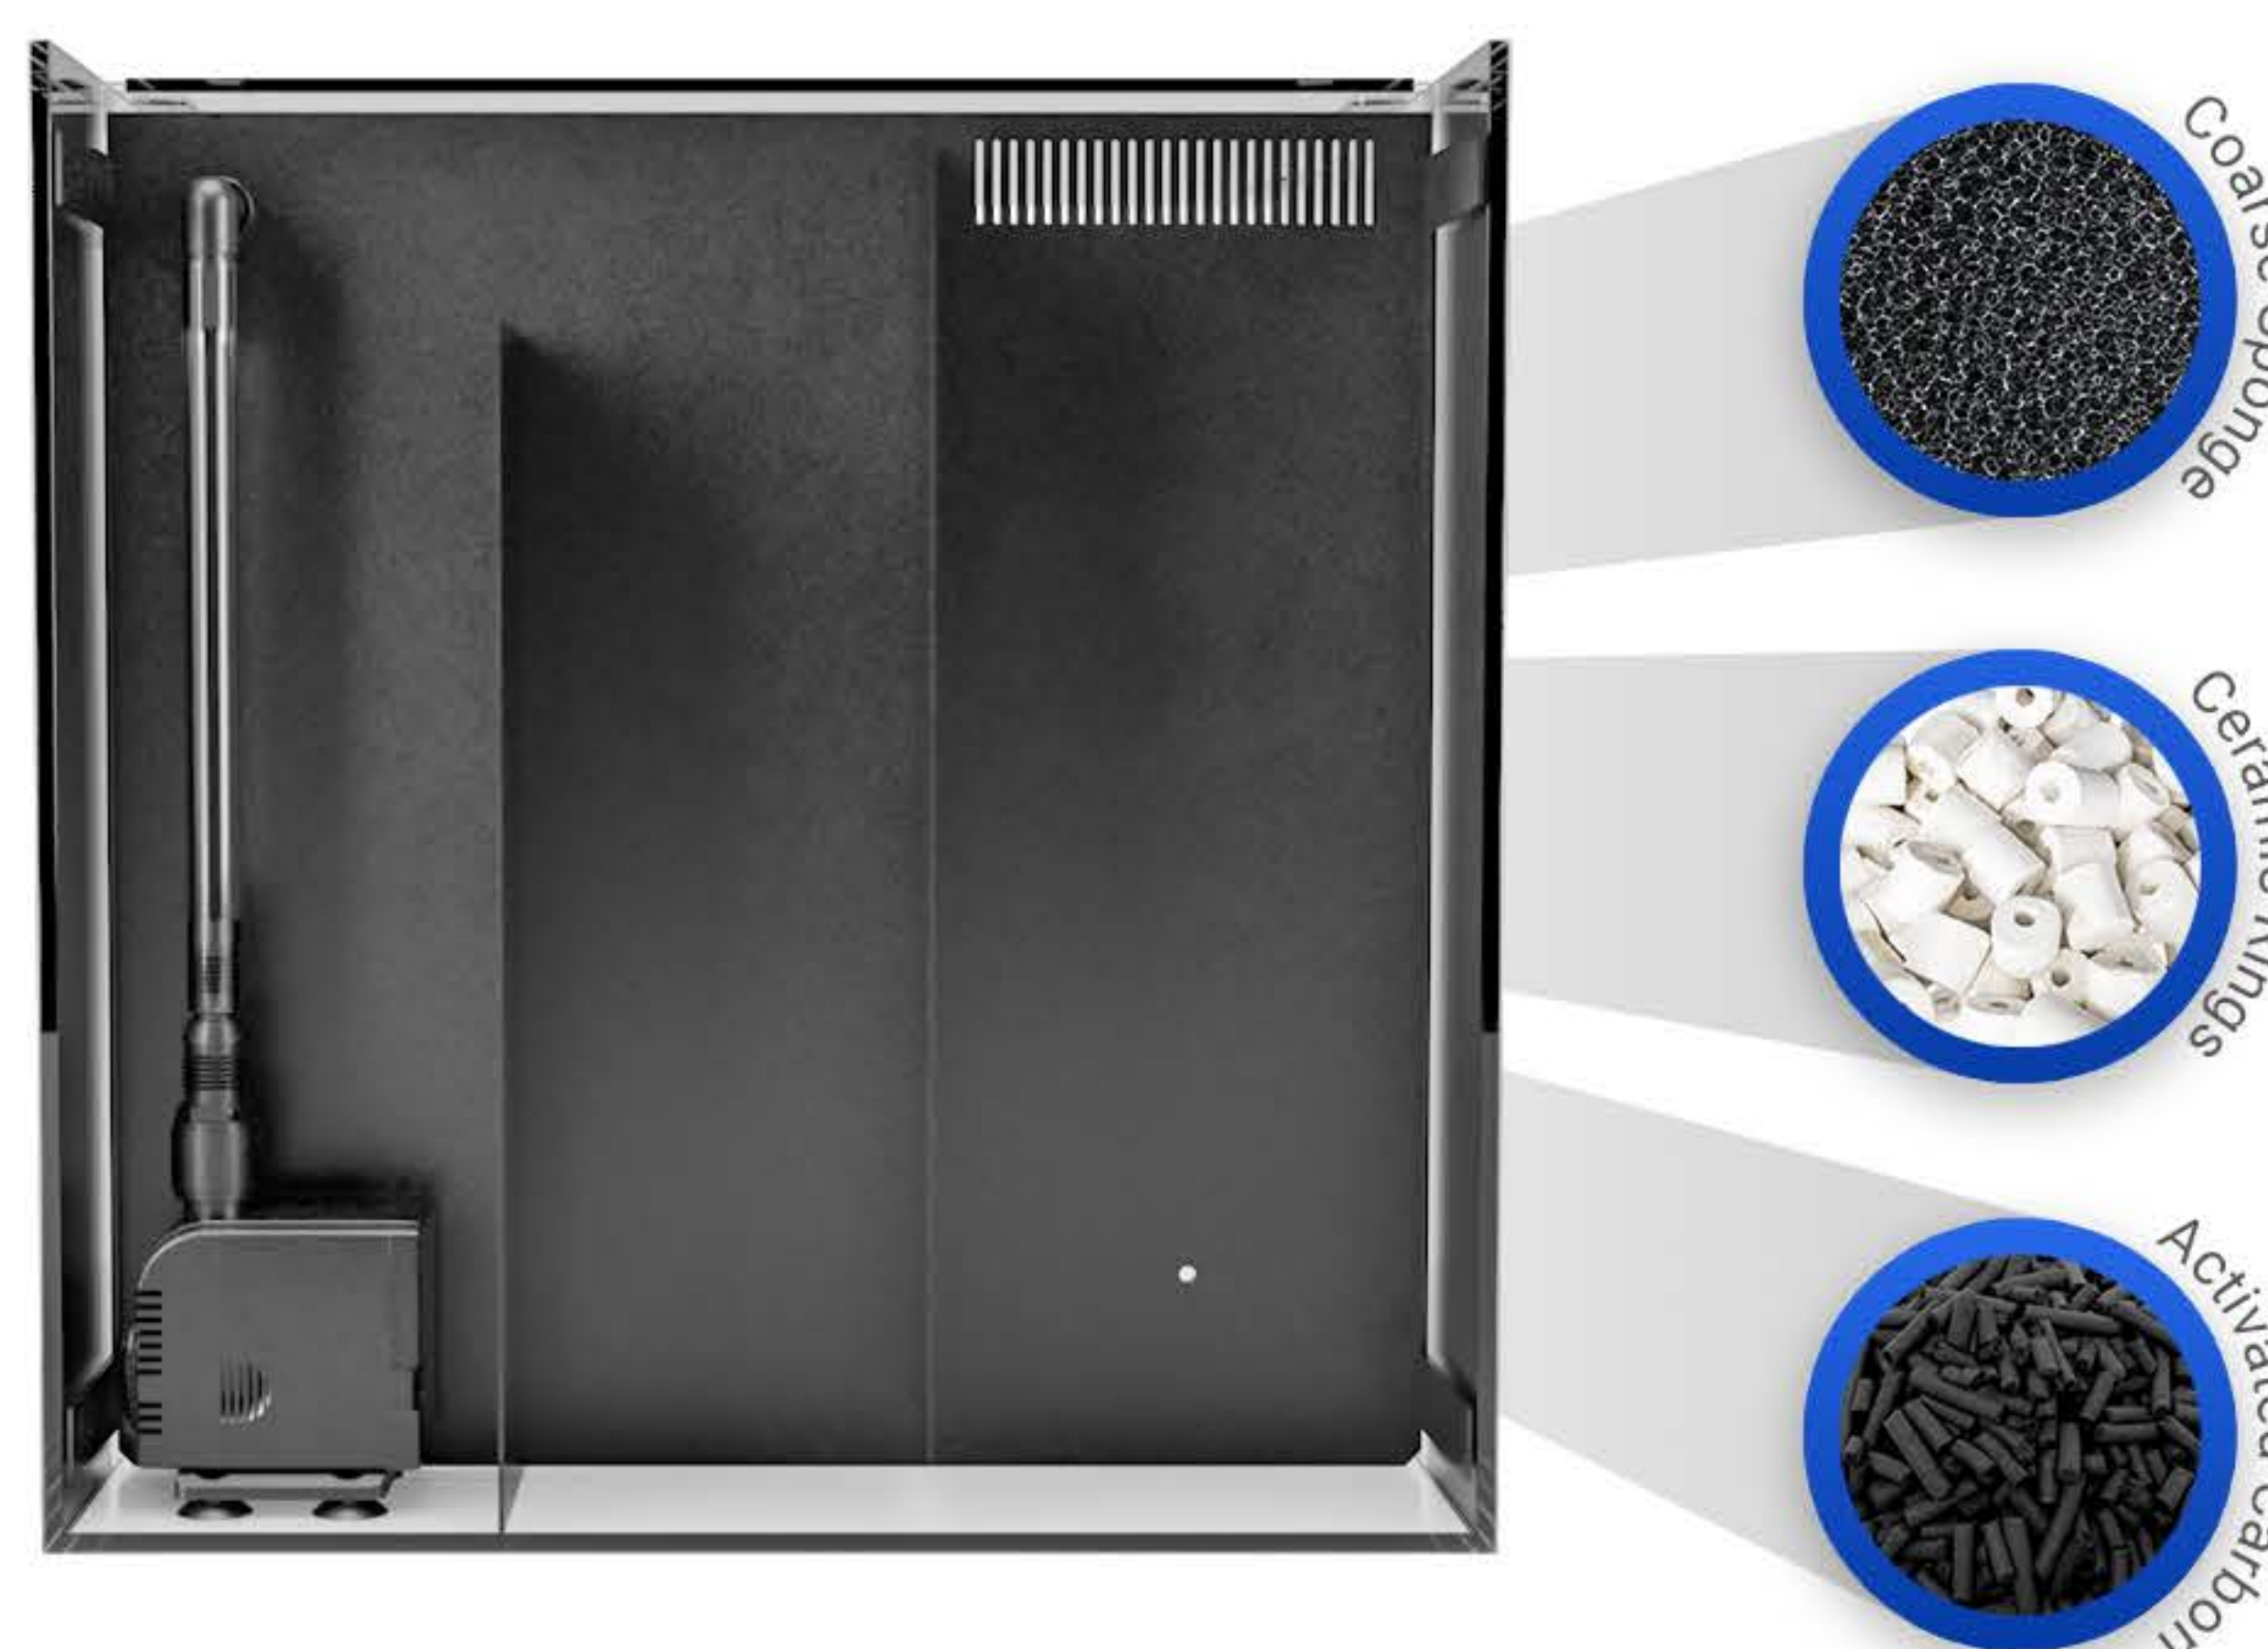

Activated carbon and ceramic rings are used to further purify water before it is cycled back into the aquarium.

Our redesigned baffling system maintains a stable water level in the central column that allows a protein skimmer to be used.

Nano Meets Rimless

The new JBJ Nano RL is an all-in-one aquarium designed with the hobbyist in mind. The integrated sump and included filtration media make it easy to start your own aquarium!

Our new streamlined design is engineered from solid glass and features stunning glass clarity. Available in 10, 15, and 20 gallon capacities.

Brilliant LED Canopy

Protect the delicate complexity of your aquarium from environmental factors while highlighting it's beauty. The optional canopy lid has integrated LED lighting suitable for most aquarium set-ups.

The optional cabinet stand highlights your aquarium while concealing external equipment. The ventilated back panel allows for JBJ Arctica Chillers to operate comfortably.
